SUMMARY

Computer Science graduate (B.Tech 2026, CGPA 7.6) currently completing an M.Tech in CSE. Built HackForge AI on my own: a website security tool with three trained ML models for vulnerability prediction, malicious URL detection and phishing message detection. Also build full-stack web apps with Next.js and Node.js and have delivered live websites for paying clients

SKILLS

Languages: Python, JavaScript, TypeScript, C, C++
Machine learning: Classification, feature engineering, model training and evaluation, NLP, deep learning, LLMs
Libraries: PyTorch, Hugging Face Transformers, Pandas, NumPy
Web: Next.js, React, Node.js, Express, WebSockets, REST APIs, Streamlit
Databases: MongoDB, MariaDB, Firebase
Cloud & hosting: Hostinger, AWS (EC2, VPC, VPC Peering, Load Balancing, Auto Scaling)
Security: Vulnerability assessment, SQL injection and XSS testing, phishing detection
Tools: Git, GitHub

EXPERIENCE

AI/ML Intern, O7 Services — Jan 2026 – Jun 2026
- Six-month internship covering data analysis, machine learning, deep learning, NLP and LLMs.
- Worked on Python assignments with real datasets: cleaning data with Pandas and NumPy, training and evaluating models, and building Streamlit interfaces.

Web Developer (Client Project), OKTravel.ae — Jan 2025 – Jul 2025
- Built and launched the company's travel website.
- Worked directly with the client on features and design changes, then handled testing and deployment.

Cybersecurity & Cloud Intern, Hoping Minds — Jun 2024 – Jul 2024
- Set up EC2 instances, VPCs and VPC peering on AWS, and configured load balancers and auto scaling groups.
- Covered core cybersecurity and networking topics alongside the cloud work.

PROJECTS

HackForge AI | Python, PyTorch, Hugging Face, Streamlit, Firebase — hackforgeai.streamlit.app
- Solo project: a tool that crawls a website, tests it for SQL injection and XSS, and flags security risks.
- Trained three classifiers: vulnerability prediction, malicious URL detection, and phishing/scam message detection using NLP.
- Prepared the dataset for each model and connected all three to one Streamlit app with a Firebase backend.

Vertex Trading | Next.js, TypeScript, Node.js, Express, WebSockets, MariaDB — github.com/hrshmann/Vertex
- Built a live crypto and forex price website with real-time prices and charts pushed to the browser through a WebSocket gateway.
- Added client accounts with KYC identity verification and email, plus an admin panel for reviewing verifications.

Client Websites | Freelance
- Built websites for a Dubai Ejari (tenancy registration) services company (dxbejari.com) and a cosmetics and boutique brand (shais.pk).

Next Quantum 1.0 (hackathon) | Team lead
- Led a team that built a route planner comparing walking, bus, auto-rickshaw and train options by time and cost.

EDUCATION

M.Tech, Computer Science & Engineering — 2026 – 2028
CT Institution of Engineering, Management and Technology (IKGPTU) | Studying remotely, exams on campus

B.Tech, Computer Science — 2022 – 2026
CT Institution of Engineering, Management and Technology (IKGPTU) | CGPA 7.6/10

CERTIFICATIONS & AWARDS

- IBM training in Data Science, Data Analysis, AI, Machine Learning and IBM Watson
- Overall Coordinator, Byte Verse 1.0 college hackathon (about 500 participants)
- Gold medal, Engineering Day Quiz, two years in a row

Languages: English (professional), Hindi (native), Punjabi (native)
